

CPT Coding Summary

Punch, ENFD, Curettage Biopsy

Global Period: 0 days

Code may apply when a small part of a much larger skin lesion is sampled for histopathology. Code should be applied, but not be limited, to punch biopsy, ENFD biopsy, curettage, and scissor biopsy.

CPT 11100 Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion

If multiple lesions biopsied: Use CPT 11100 for first punch and also use CPT 11101 for each additional punch. Does not require: 59, 51, or X modifier on CPT 11101 because it is an “add-on” code.

Shave Biopsy

Global Period: 0 days

Codes may apply when superficial skin lesions, such as large flat tumors or infiltrative tumors which must be scooped out (macules, papules, plaques), are sampled by shave or saucerization technique. Code selection depends on location and size of lesion.

CPT 11100 Biopsy of skin, subcutaneous tissue and/or mucous membrane (including simple closure), unless otherwise listed; single lesion

Fine Needle Aspiration Biopsy

Global Period: 0 days

Codes may apply when sampling from a deep seated subcutaneous mass for diagnosis (lipoma, ganglion cyst, soft tissue neoplasm) by fine needle aspiration.

CPT 10021 Fine needle aspiration; **without** imaging guidance

CPT 10022 Fine needle aspiration; **with** imaging guidance

Nail Unit Biopsy

Global Period: 0 days

Code may apply for inflammatory or neoplastic lesions of the nail unit (plate and bed/matrix). This code connotes more than simple “distal clipping of nail” and should not be used for routine nail debridement or onychomycosis screening.

CPT 11755 Biopsy of nail unit (e.g., plate, bed, matrix, hyponychium, proximal and lateral nail folds)

Bone Biopsy, Trocar or Needle

Global Period: 0 days

Code may apply when superficial bone tissue is sampled.

CPT 20220 Biopsy, bone, **trocar, or needle**; superficial
